FINAL PROJECT INTEGRITY AND AI USAGE STATEMENT

MEDIFIND PH - GROUP APEX

Project Title: MediFind PH: A RAG-Based OTC Medicine Information Assistant Using Pharmaceutical Entity Normalization

Course/Section: ITC-C508 - Deep Learning (Natural Language Processing)

Authors: Mendez, Juliana Nichole; Subala, Antonio Jayven; Urbano, Ivan

Group: Group Apex

Submission Date: _____

PURPOSE OF THIS STATEMENT

This document records the authors' declaration regarding the authenticity of the submitted work, the accuracy of the reported experiment results, the contribution of each group member, and the transparent use of generative artificial intelligence tools. It must be reviewed and signed personally by every listed author before submission.

1. ACADEMIC INTEGRITY AND AUTHENTICITY DECLARATION

[ ] We declare that MediFind PH is the work of the students named in this statement, except for sources, software libraries, public models, and AI assistance that are explicitly acknowledged.

[ ] We did not knowingly submit another person's project as our own, falsify authorship, fabricate source documents, or represent unexecuted experiments as completed experiments.

[ ] The three MediFind OTC PDF volumes are the project's controlled factual references. Medicine facts, expected evaluation answers, and citations must be traceable to those documents.

[ ] All external materials, frameworks, pretrained models, libraries, and references used in the project are acknowledged in the report, source package, or reproducibility documentation.

[ ] Each author accepts responsibility for reviewing the final submission and for correcting any error discovered before submission.

2. ACCURACY OF REPORTED RESULTS

[ ] The chunking tables and notebook outputs preserve the recorded experiment results for Configurations A through E.

[ ] Configuration D remains 800-character chunks, 200-character overlap, and top-k 3; the production checkpoint contains 762 chunks.

[ ] The chatbot response evaluation preserves an actual 36-question baseline API run. Baseline results are not relabeled as post-fix results.

[ ] Limitations, failed cases, partial passes, OCR constraints, and the fact that final Phase 5 manual testing remains the researchers' responsibility are disclosed rather than hidden.

FINAL PROJECT INTEGRITY AND AI USAGE STATEMENT

MEDIFIND PH - GROUP APEX

3. GENERATIVE AI USAGE DISCLOSURE

Generative AI assistance was used in this project and is disclosed here. The authors must not sign a statement claiming that no generative AI was used. The use of AI does not transfer academic responsibility away from the students.

Tool/Service: OpenAI ChatGPT/Codex (AI-assisted coding, analysis, documentation, and artifact-generation environment).

Disclosed purposes:

- Reviewing and explaining RAG implementation behavior, retrieval errors, formulation matching, leaflet-section extraction, citation scoping, and medical-safety controls.
- Assisting with code changes, regression-test scaffolding, evaluation scripts, and reproducibility instructions under student direction.
- Organizing deliverable folders and drafting or formatting reports, notebooks, spreadsheets, CSV files, manifests, checksums, and this signature-ready statement.
- Helping analyze actual saved experiment outputs and actual live-API evaluation results; AI assistance was not treated as a factual medicine source.

Controls and student responsibilities:

[ ] The three official project PDFs remain the only factual reference for medicine answers and expected evaluation answers.

[ ] Original experiment outputs and baseline metrics are preserved. No result should be called executed unless corresponding execution evidence exists.

[ ] The students are responsible for reading, testing, correcting, and approving all AI-assisted code and text before submission.

[ ] AI did not sign this document, determine individual grades, or certify the truth of any student’s declaration.

[ ] If the institution or instructor requires a different disclosure format or restricts generative AI use, the authors must obtain guidance before signing.

4. INDIVIDUAL CONTRIBUTION RECORD

Each student must personally describe specific contributions. Do not leave this section blank and do not copy identical descriptions unless the work was genuinely shared.

Student: Mendez, Juliana Nichole

Specific contributions: _____

_____

_____

_____

Student: Subala, Antonio Jayven

Specific contributions: _____

_____

_____

_____

Student: Urbano, Ivan

Specific contributions: _____

_____

_____

_____

Contribution review initials:

Mendez: _____ Subala: _____ Urbano: _____

5. FINAL DECLARATION

By signing below, each student confirms that they have read the complete final submission, that their contribution description is accurate, that the reported results are presented honestly to the best of their knowledge, and that the generative AI disclosure above is complete. Each signer understands that false statements, fabricated evidence, undisclosed AI use, or misrepresented contributions may be handled under the institution's academic integrity rules.

STUDENT SIGNATURES

Printed Name: Mendez, Juliana Nichole

Signature: _____ Date: _____

Printed Name: Subala, Antonio Jayven

Signature: _____ Date: _____

Printed Name: Urbano, Ivan

Signature: _____ Date: _____

OPTIONAL ADVISER/INSTRUCTOR ACKNOWLEDGMENT

Name: _____

Signature: _____ Date: _____

PRE-SUBMISSION CHECKLIST

[ ] All three contribution descriptions are completed.

[ ] All three students reviewed the AI usage disclosure.

[ ] All three students signed and dated the statement personally.

[ ] The signed PDF is included in the final submission folder.

[ ] No unsigned or draft version is submitted as the signed final statement.

Document status: SIGNATURE-READY TEMPLATE - NOT VALID UNTIL COMPLETED AND SIGNED BY ALL AUTHORS
